Almost Union-Find

I hope you know the beautiful Union-Find structure. In this problem, you're to implement something similar, but not identical.

The data structure you need to write is also a collection of disjoint sets, supporting 3 operations:

1 p q	Union the sets containing p and q. If p and q are already in the same set, ignore this command.
2 p q	Move p to the set containing q. If p and q are already in the same set, ignore this command
3 p	Return the number of elements and the sum of elements in the set containing p.

Initially, the collection contains n sets: $\{1\}$, $\{2\}$, $\{3\}$, ..., $\{n\}$.

Input

There are several test cases. Each test case begins with a line containing two integers n and m (1<=n,m<=100,000), the number of integers, and the number of commands. Each of the next m lines contains a command. For every operation, 1<=p,q<=n. The input is terminated by end-of-file (EOF). The size of input file does not exceed 5MB.

Output

For each type-3 command, output 2 integers: the number of elements and the sum of elements.

Sample Input

- 5 7
- 1 1 2
- 2 3 4
- 1 3 5
- 3 4
- 2 4 1
- 3 4
- 3 3

Sample Output

3 12

3 7

2 8

Explanation

Initially: $\{1\}$, $\{2\}$, $\{3\}$, $\{4\}$, $\{5\}$ Collection after operation 1 1 2: $\{1,2\}$, $\{3\}$, $\{4\}$, $\{5\}$ Collection after operation 2 3 4: $\{1,2\}$, $\{3,4\}$, $\{5\}$ (we omit the empty set that is produced when taking out 3 from $\{3\}$) Collection after operation 1 3 5: $\{1,2\}$, $\{3,4,5\}$ Collection after operation 2 4 1: $\{1,2,4\}$, $\{3,5\}$
